- **Section 4: (1)** - Class C comprises mammals, reptiles and batrachians other than those of class A and B and birds of the annexes III of the CITES.
(2) – These class C species are partially protected; their capture and killing are regulated in order to maintain the dynamics of their populations.

- **Section 5:** The young of the animals of these three classes as well as the eggs of birds of class A and B shall benefit from the class A protection scheme.
- **Section 6:** With reserve to contrary dispositions prescribe by specific national texts, they are automatically taking into account in the national classification:
 - In class A, species of Annex I of the CITES classification and species belonging to groups settled out of the wild, in critical danger of extinction, in danger, vulnerable with regards to the classification of UICN;
 - In class B, species of Annex II to the exception of those already admitted into class A at the national level of CITES classification and those of groups quasi threatened to minor preoccupations of the categories of UICN;
 - In class C, species of Annex III to the exception of those already admitted into classes B or A at the national level of CITES classification or belonging to groups of minor preoccupation according to UICN.
